# AI-101: GAPS

Introduction to General Agent Problem Solving

Course Orientation & Enrollment Details

# Course Orientation

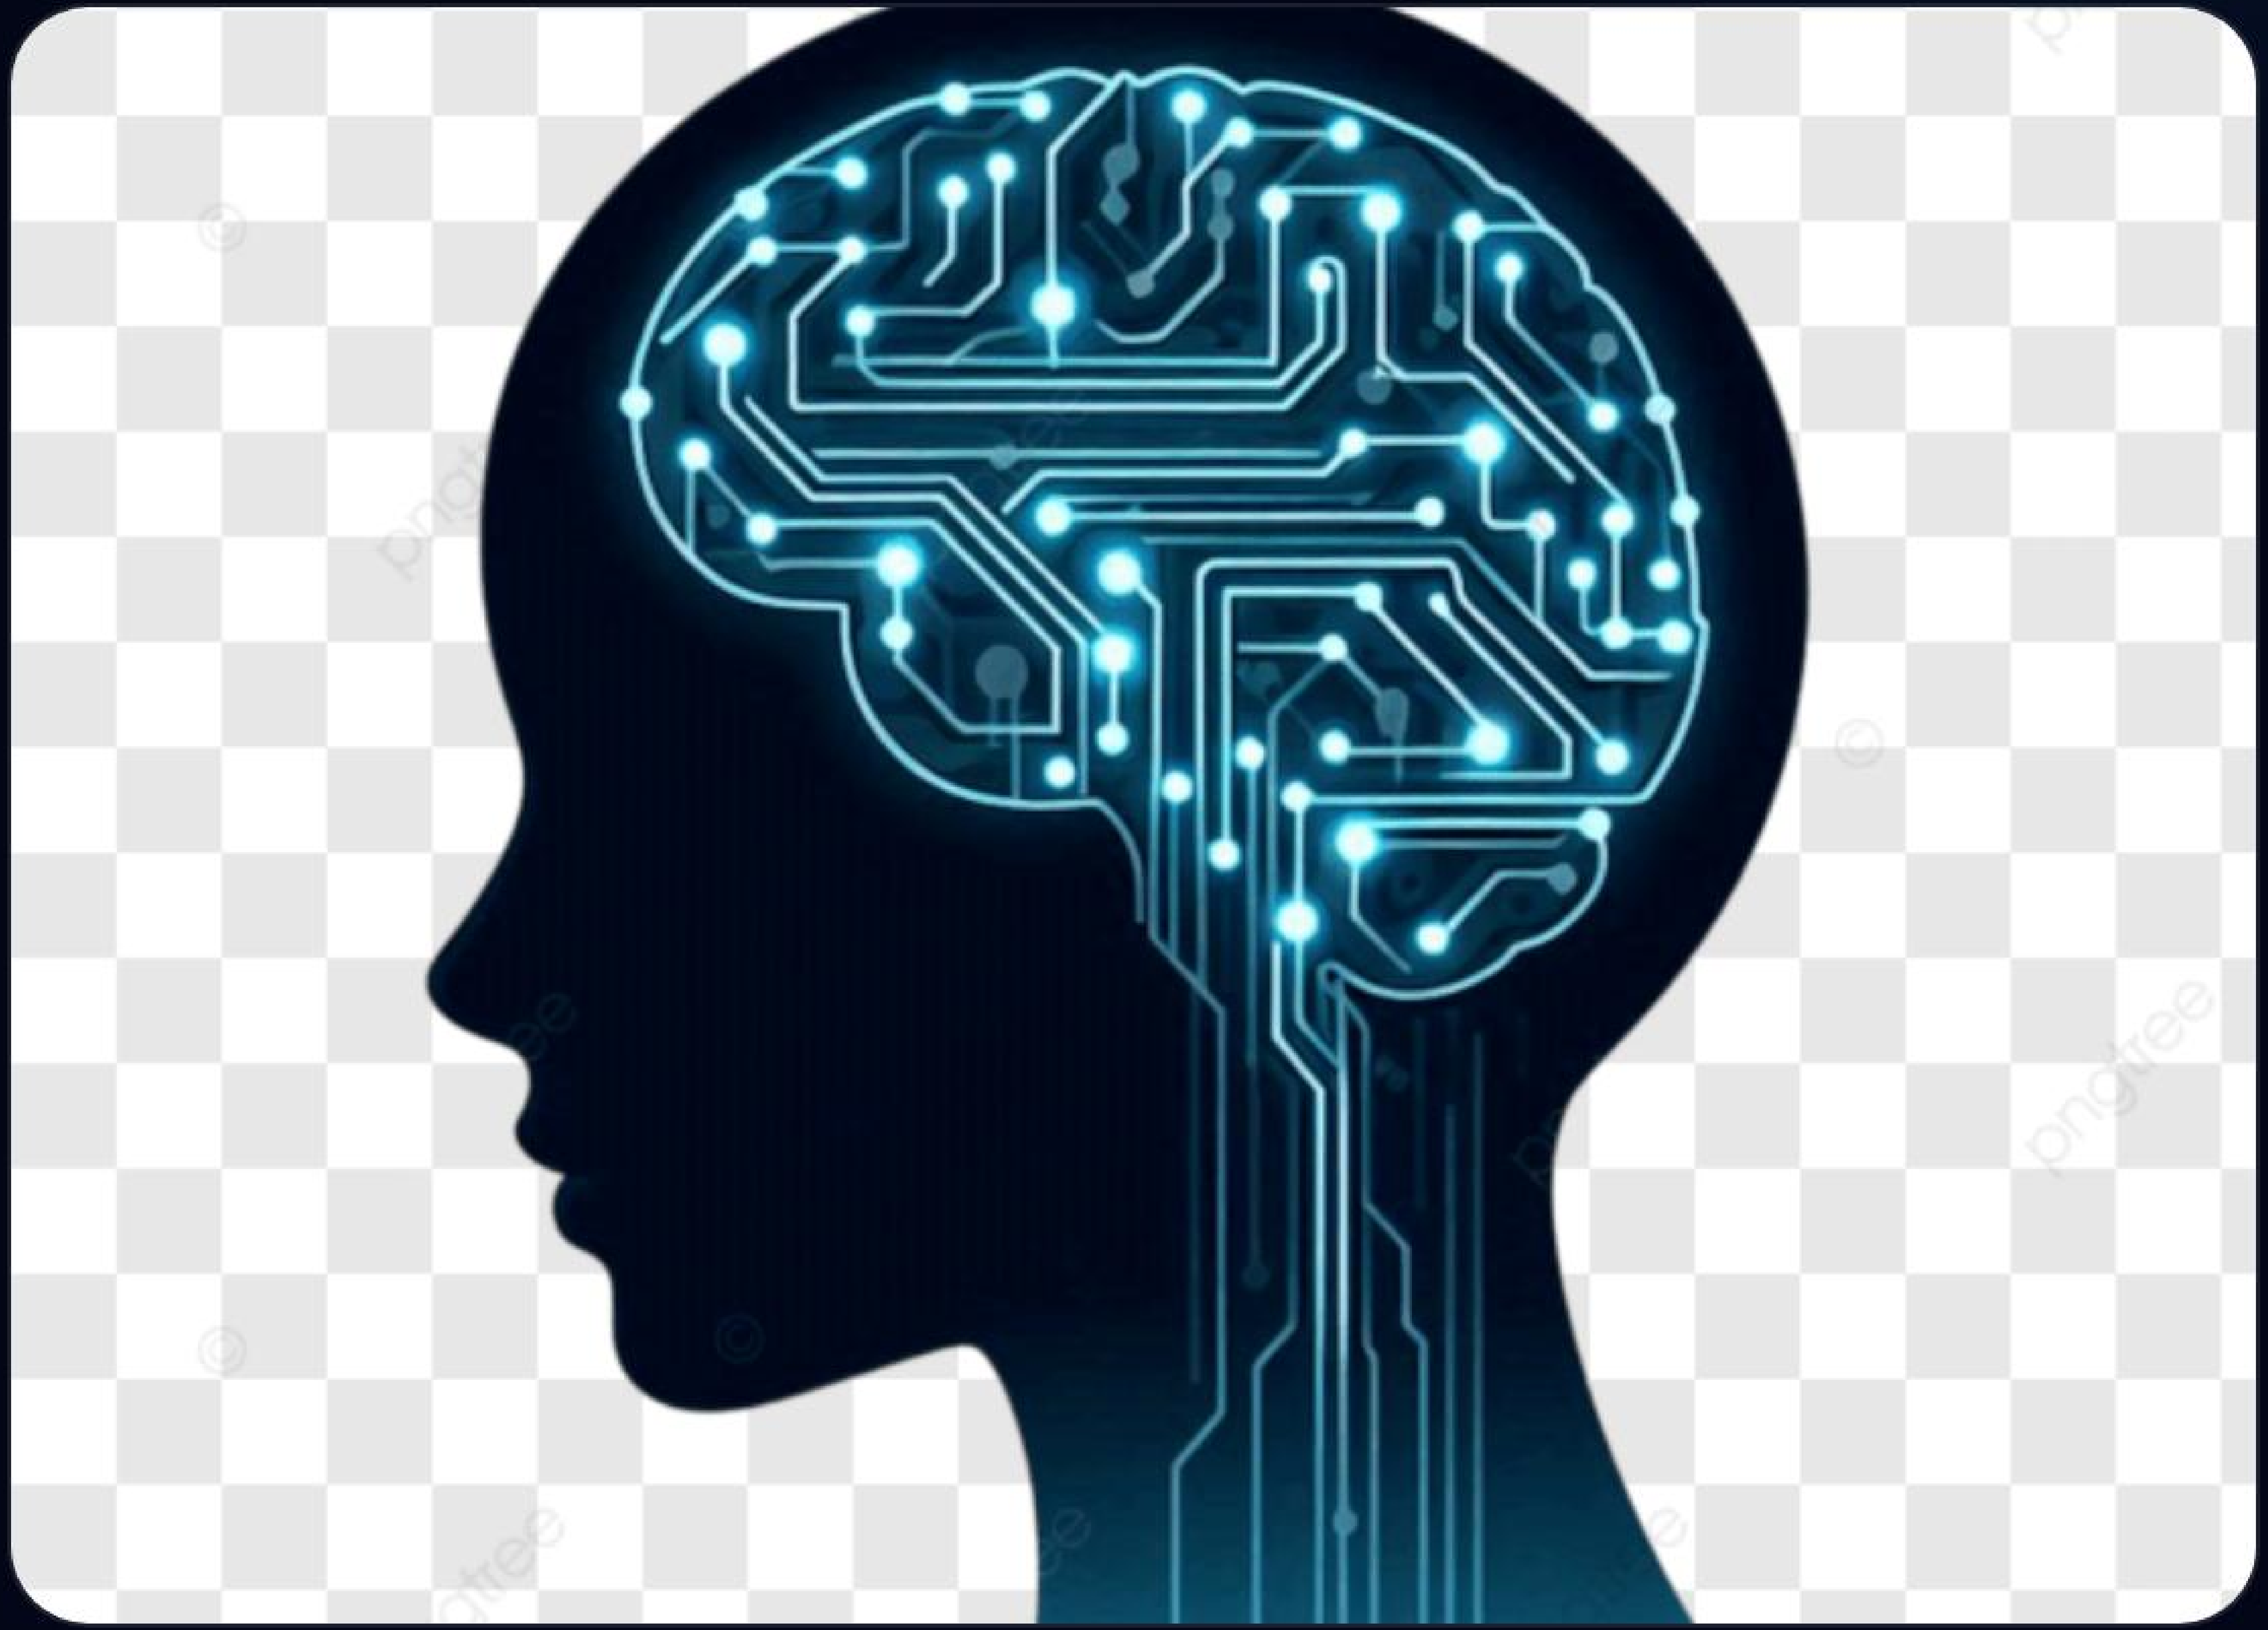
Empowering the next generation of AI Engineers

# Defining GAPS

**General Agent Problem Solving (GAPS)** is the core of modern agentic AI. It moves beyond simple text generation to autonomous reasoning.

In this course, we define agents as systems capable of:

- Multi-step reasoning and planning.
- Utilizing external tools and APIs.
- Executing complex goals autonomously.
- Continuous self-correction and feedback loops.



# The Paradigm Shift

### Generative AI

LLMs acting as creative interfaces. They generate text, code, and images based on static prompts. The human remains the primary driver of execution.

### Agentic AI

LLMs acting as decision-making brains. They orchestrate workflows, manage memory, and interact with the physical and digital world to solve problems.

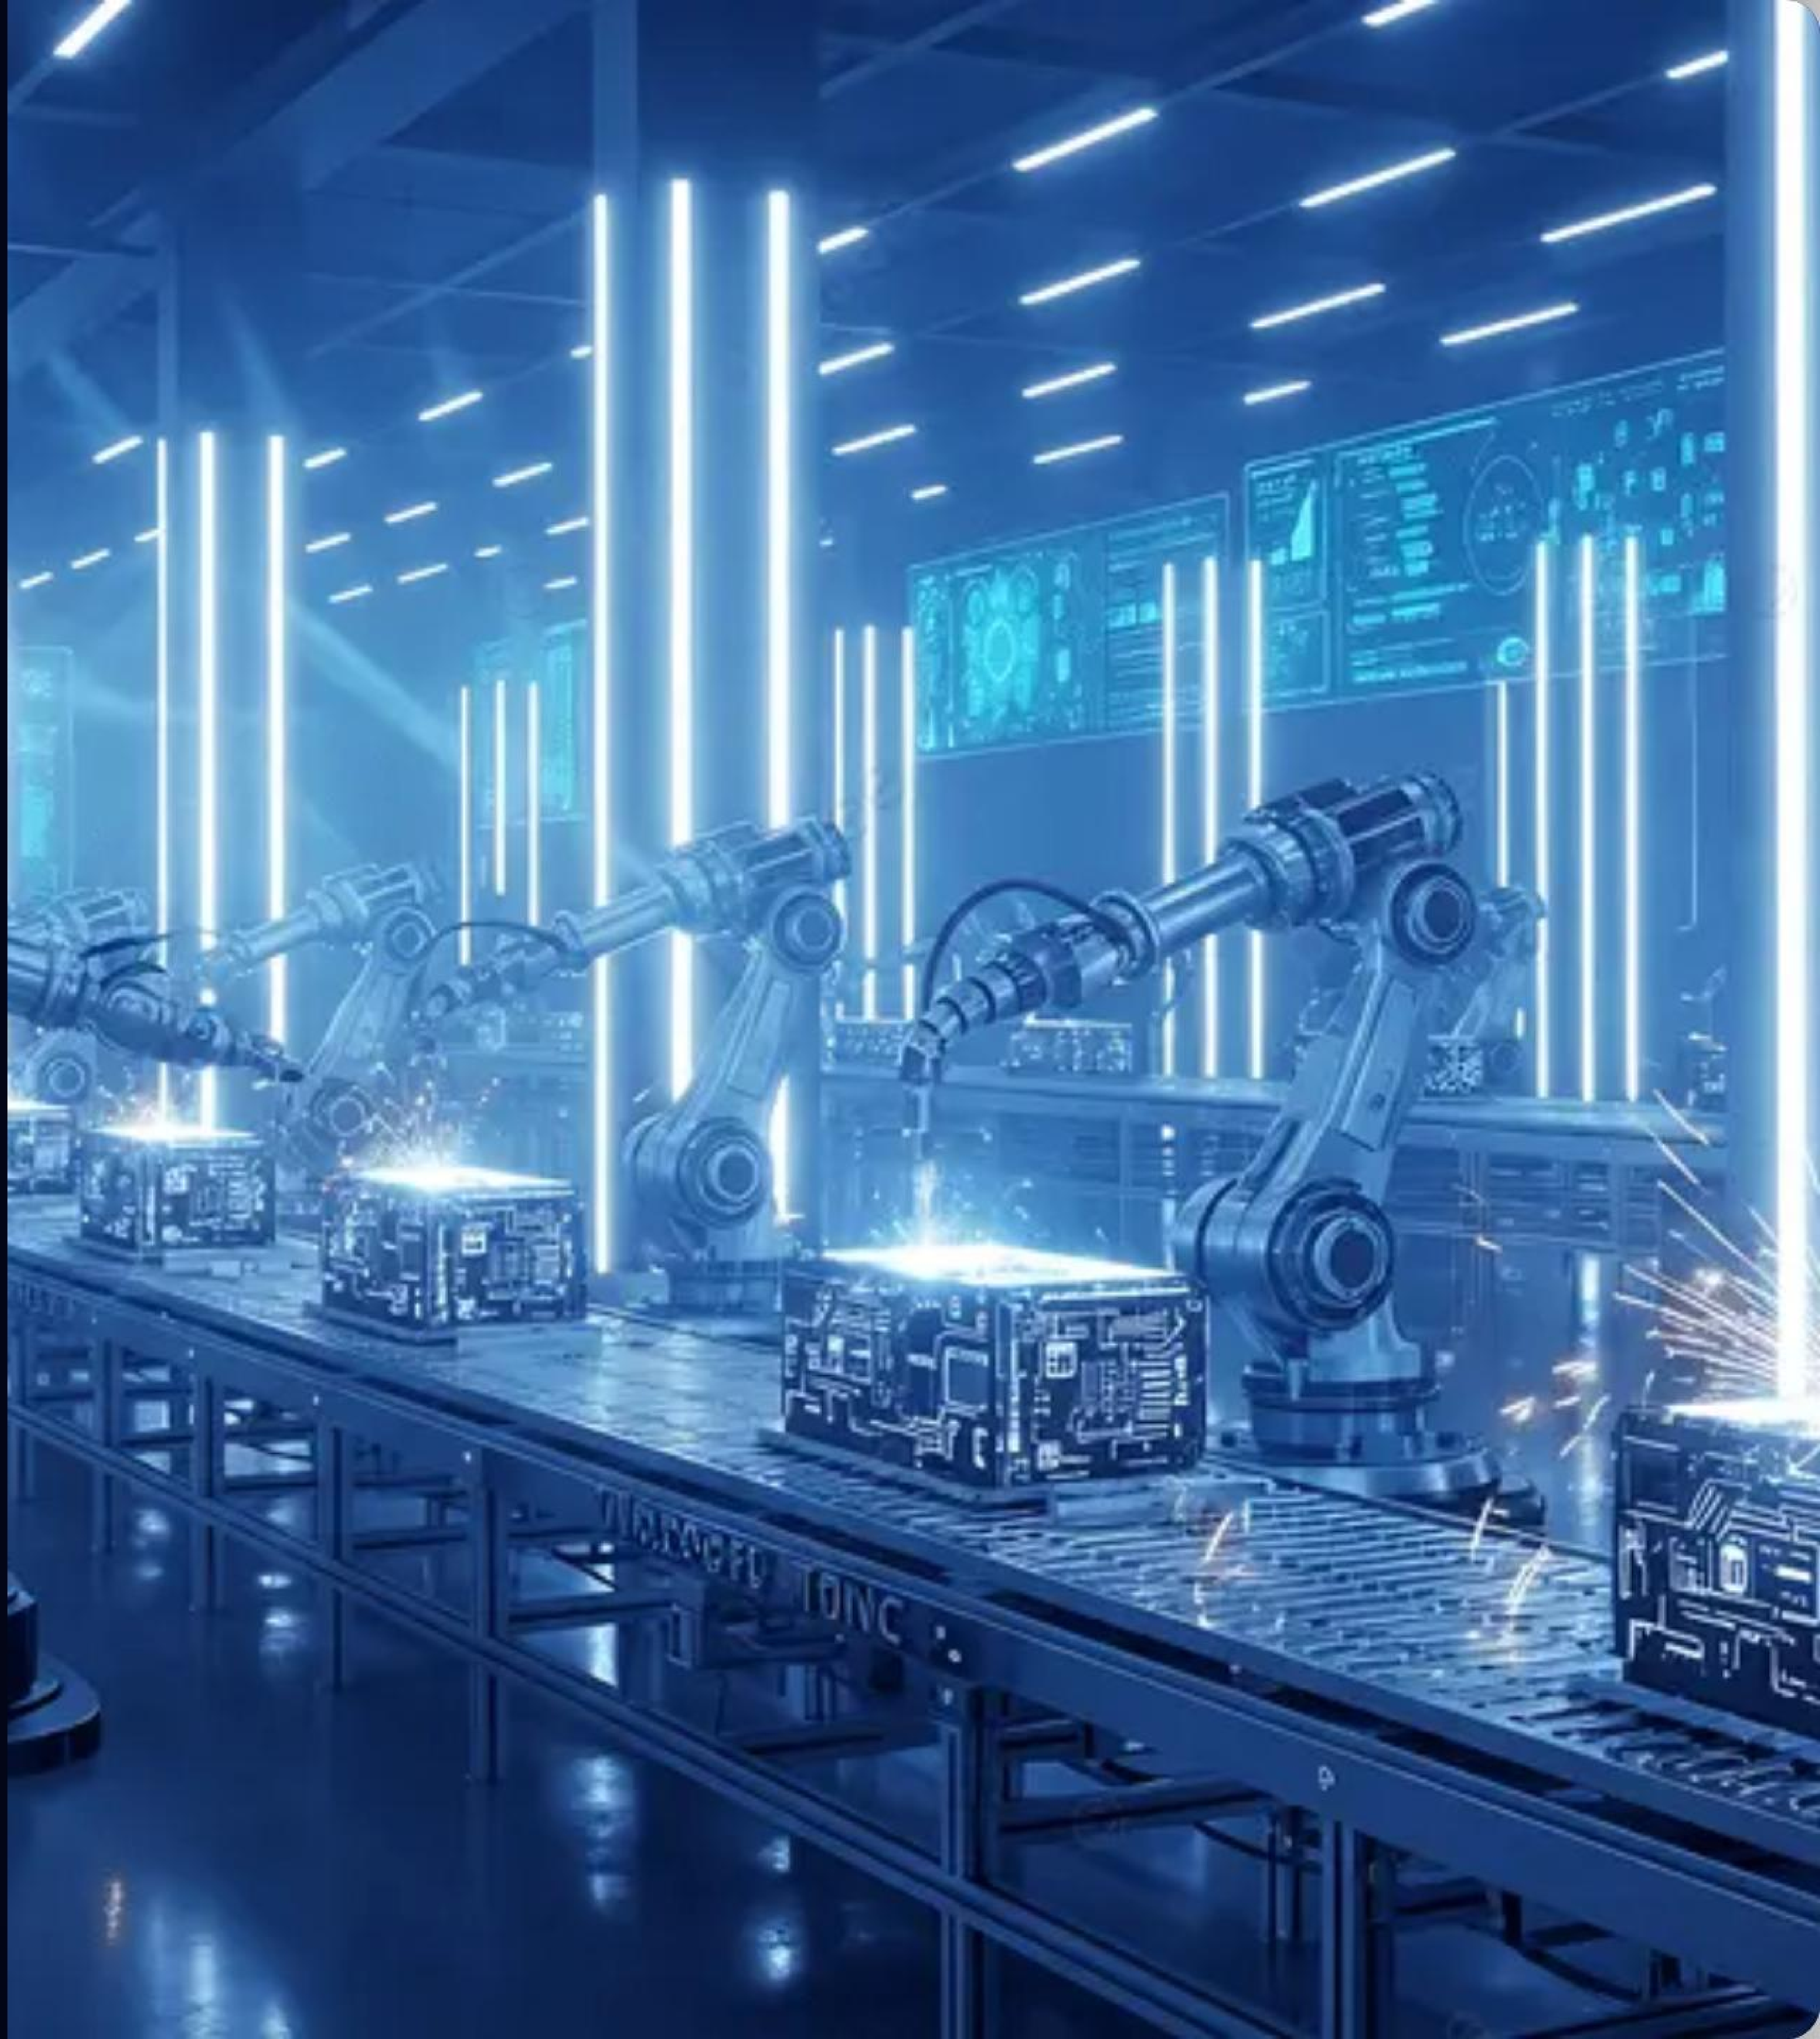
# Core Learning Objectives

- **Agent Architecture:** Understand the cognitive frameworks behind reasoning and planning.
- **Hands-on Development:** Build autonomous agents from scratch using Python.
- **Multi-Agent Systems:** Learn how to coordinate teams of agents for massive scale.
- **Ethics & Governance:** Safe deployment of autonomous agents in industry.

# Agent Factory

The "Agent Factory" concept is the cornerstone of our methodology. We don't just build agents; we build systems that build agents.

This approach focuses on scalability, repeatability, and precision in agentic workflows, moving from experimental scripts to industrial-grade AI solutions.



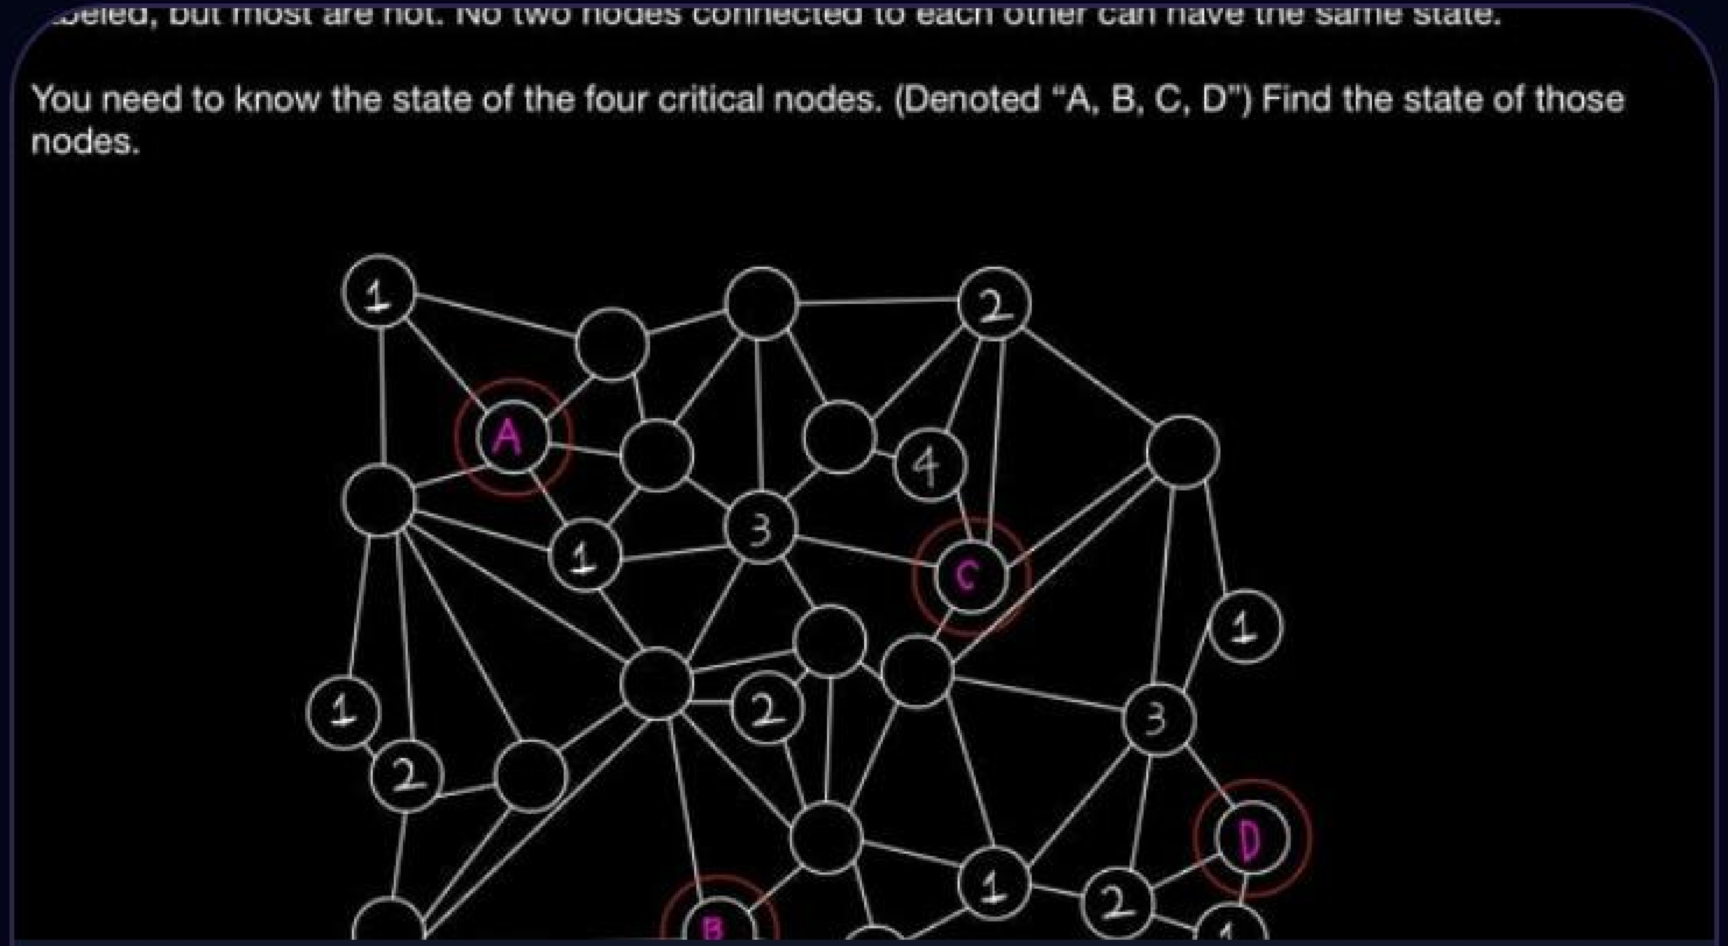
# The Tech Stack

### Production-Ready Tools

We leverage the most advanced frameworks in the ecosystem:

- **Python & Pydantic:** For data validation and structured logic.
- **CrewAI & LangGraph:** For agent orchestration and state management.
- **Ollama & OpenAI:** For local and cloud-based inference.

# GAPS in Industry

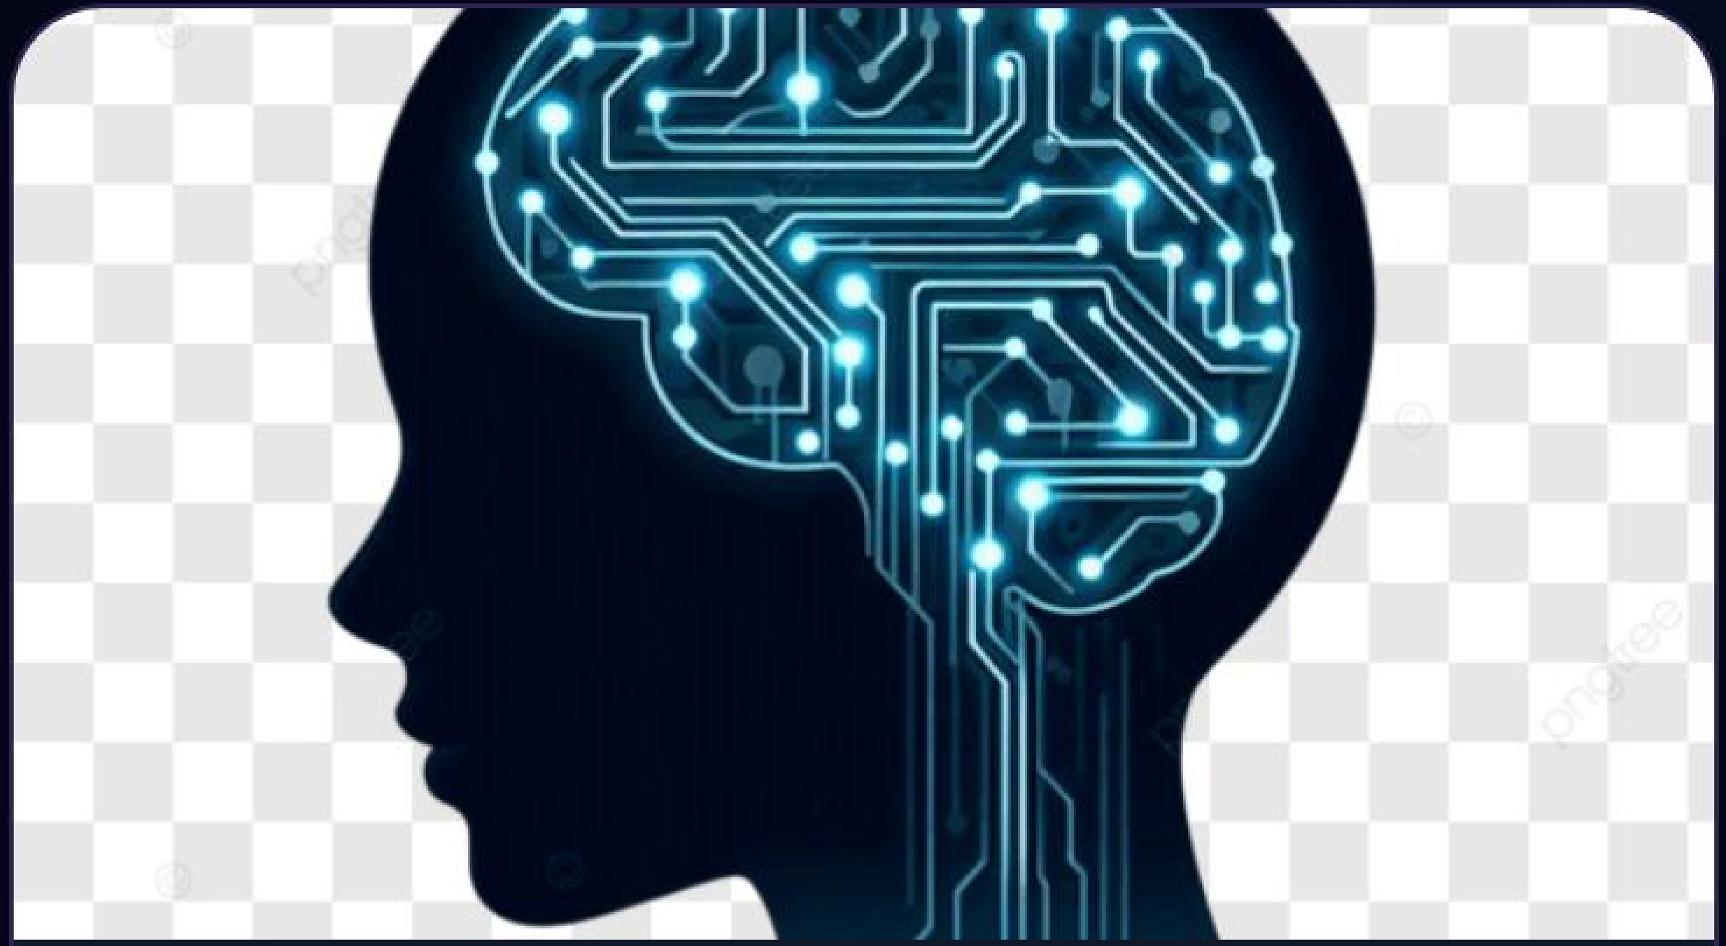


## Automation

Automating supply chains and logistics with autonomous decision agents.

## Finance

Building real-time analysis agents for market prediction and risk assessment.



## SaaS

Integrating autonomous customer success agents that resolve tickets without human help.

# Course Roadmap

**Month 1**

Orientation & Fundamentals of LLMs

**Month 2**

Agentic Frameworks & Tools

**Month 3**

Multi-Agent Orchestration

**Month 4**

Capstone Project & Deployment

# Deadline Approaching

04

June 2026

**Final Call for Registration**

The registration window for the AI-101 course closes on **June 4, 2026**. Ensure your enrollment is complete to access the live orientation sessions and student portal.

Join thousands of students in the Panaversity movement to redefine the future of problem-solving.

# Course Resources

| Resource | Description | Access |
|---|---|---|
| **Agent Factory Book** | Comprehensive guide on GAPS frameworks. | Available on Panaversity |
| **Lecture Slides** | Downloadable PDF/Google Slides of all sessions. | Student Portal |
| **Github Repo** | Code templates for agents and workflows. | Private Repo Access |
| **Community Forum** | 24/7 support and networking with peers. | Discord Server |

# Q&A

Thank you for joining the orientation!
